Testing

Qual IT

Certainty's good

Successful outcomes from your strategic IT investment require quality at every step – from defining requirements and creating a delivery plan to setting up project governance and assembling a test team.

The right test team will create confidence in the quality of the software application or system before it goes live, and reduce the risk of unsuccessful delivery.

Whether your in-house test team needs additional resource, specialist skills or experience, our test teams can tailor a pragmatic approach.

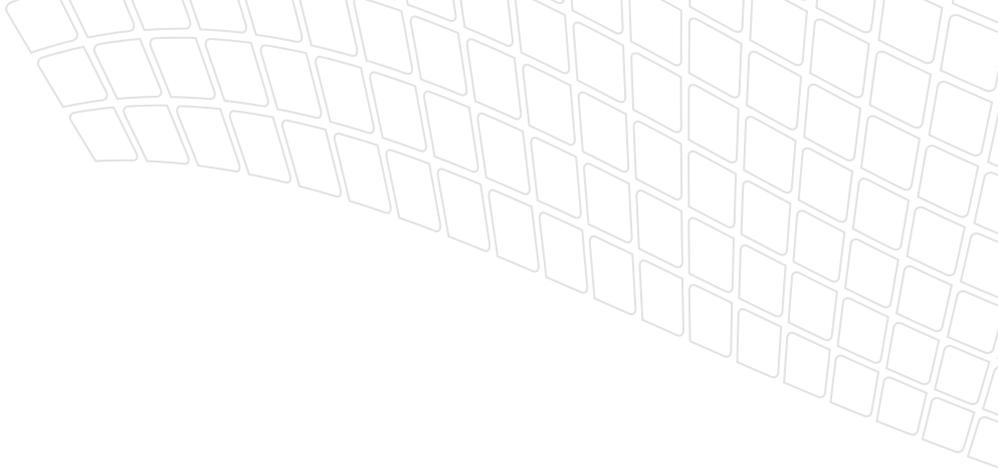

Achieving quality through IT projects

Our specialist testers, and best practice test strategy, analysis, design, planning, management, execution and reporting, help mitigate project risk and unlock the full potential of any IT project.

We can ensure you'll have the right information about solution quality to enable you to make informed business decisions about the impact of any potential issues.

This approach can also:

- Increase the quality of project deliverables
- Elevate the internal testing and quality capabilities of your organisation
- Increase confidence in projects and processes
- Reduce business risk inherent in IT development activities
- Reduce costs for testing and quality assurance
- Reduce time to market to maximise the business value of the change

We're ready at any stage

We have over 200 test professionals, with the right expertise and experience in most commercial off-the-shelf packages, major vendor products and open source tools. Whether you're implementing a CRM, ERP, FMIS or a new mobile app, we will ensure there's a continuous focus on optimising delivery and reducing your testing costs, via test tools, technology, knowledge-sharing and focussed IP retention. And because we're not tied to any vendors, we can also provide sound, independent advice around technology, tools and processes.

Test delivery options

Whatever you need, we have working examples of different models of successful testing delivery.

Under our managed testing service we work actively with your organisation, and take responsibility for all the testing outcomes.

Our test partnership service and expertise supplements your company's existing capabilities, providing you with the resources you need, when they're needed.

A pragmatic approach

We can tailor a pragmatic approach to testing that encompasses the most appropriate test and assurance roles, test types and test techniques, to ensure your solution functions as expected and continues to work seamlessly for end users. Outputs from testing and QA activities will also allow for informed decision making.

Delivery of quality to the end

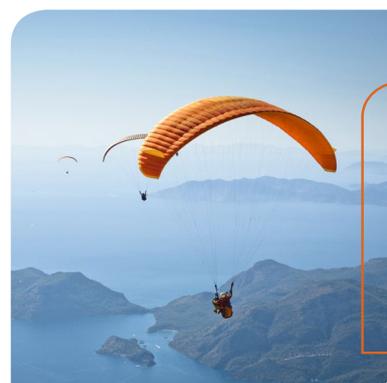

Before go-live, you'll be looking for assurance from your project team that your solution is ready – we've all seen the headlines when a high profile technology project goes wrong. We can oversee user acceptance testing, to evaluate the solution's compliance with the business requirements, and assess whether it's ready for delivery in the real world.

What to expect from our testers

With a strong focus on objectively-measured business risk, Qual IT testers ensure that you have accurate and timely metrics for solution quality that enables you to understand the impact of any known issues, and to make fully informed decisions on how to proceed.

Our testing services include:

- A full range of services including test consulting, test management, test design, and test execution
- Strategy based on various methodologies
- Strategic test planning
- Functional test planning and execution
- Specialist integration, mobility, data migration and data warehousing testing
- User acceptance testing oversight
- Business users and stakeholder training and guidance

Certainty
in your IT
investment

Why Qual IT Testing?

Qual IT's QA services are outcome-focused and driven by experience.

We know IT projects can cost both money and time, so we focus on efficient, practical strategies throughout the project lifecycle. We can be there from the beginning, from initial test strategy, planning and scoping, through to delivery, maintenance, and ongoing support.

Our testing team is qualified, capable, and experienced. We have worked with some of New Zealand's leading companies on a wide range of successful IT projects and programmes, large and small. We work as trusted, pragmatic advisors, providing expertise at every stage to help guide your project to success.

Wherever you are on your project journey, certainty's good – talk to us about ensuring successful outcomes.
